CARBURETOR SERVICE TOOLS

CF107S Deluxe Carburetor Float Scale

Heavy, soggy floats waste fuel! Know immediately if a float has absorbed gasoline.

The CF107S Float Scale features *vastly* expanded readings for extreme accuracy. The scale body reads from 7 to 13 grams, and by just mounting it through a second hole, an additional range (13 to 19 grams) is available.

Readings to 1/10 gram are easily made on the stainless steel body. The furnished stand allows the scale to come to rest much easier than by trying to hold by hand. Specifications for float weights are included.

CST 10C

Two Piece Multi Purpose Tool

The CST 10C is essential to make adjustments on Rochester Varajet, Dualjet and Quadrajete Carburetors, as the design of the screw head and clearances make it impossible to use standard hand tools.

These two double ended tools are used to adjust:

- Lean Mixture Screw (all models)
- Idle Air Bleed (Varajet only)
- Throttle Position Sensor

These tools also can be used to remove the Main Metering Jets and the Rich Stop Screw on Dualjet and Quadrajete Carburetors.

Alloy steel, heat treated for toughness and years of dependable service.

CARBURETOR SERVICE TOOLS

CST 12 **The "NOID Lite"** **TBI Injector Harness Tester**

- Saves Time and effort

This handy tool quickly checks the TBI harness for power, which normally is a three-hand, two person operation. The "NOID Lite" quickly determines the problem area — electrical or fuel system. Just disconnect harness from solenoid, plug in tester and turn on ignition. From the drivers seat you'll be able to see if tester light is flashing — indicating system is OK. Steady or no light indicates an electrical malfunction.

Tester features tough molded body, brass pins for good conductivity and 6.3V bulb which will not harm the ECM with excessive current draw.

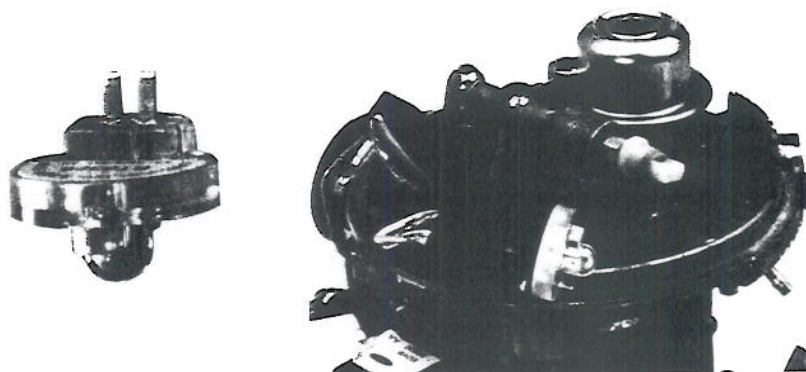

CST 13 **The "EFI Lite"**

This handy new tester is designed for use on vehicles having Bosch direct fuel injection, such as GM, Ford plus many imports such as: Toyota, Datsun, VW and Mercedes.

The "EFI Lite" reduces expensive trouble shooting and makes quick work of a former 2 person job, by identifying fuel or electrical system problems.

Easy to use — disconnect harness from solenoid, plug tester into harness and turn ignition on. Visible from passenger compartment, a flashing tester light indicates normal pulsing voltage. Steady or no light indicates electrical problems.

Body is tough molded plastic with phosphor bronz contact pins.

CST 14 **Idle Adjusting Tool**

The CST 14 Idle Adjusting Tool is for all Rochester Carburetors 1979 and newer. Features 12" flexible steel cable with calibrated knob for extra fine adjustment of mixture and idle when socket is not visible.

Extra thin wall socket, fits adjusting screw exactly and won't fall off during adjustment.

"Double D"

CARBURETOR SERVICE TOOLS

CST 15

Universal Carburetor Stand

Universal applications, adjustable to fit all 1, 2 and 4 barrel, Rochester, Ford, Holley, Carter, Chrysler and other carburetors. Heavy nickel plated steel legs, allow technician to have both hands free to work on carburetor. Stand prevents damage and adjustment changes caused by working on a flat bench.

CST 16

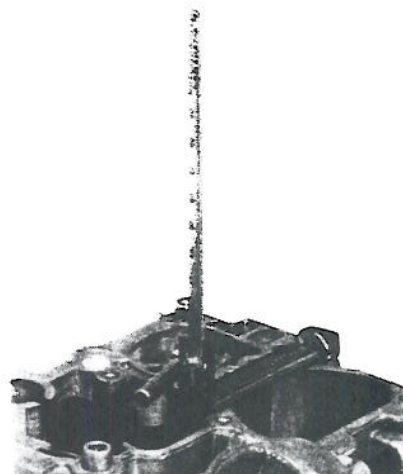

Sliding Scale

- Check Float level with disassembled carburetor

Space limitation on Varajets require the use of this new style sliding scale where old types will not work.

Precise metric and inch stainless steel scales with friction slide ensures easy readings and long life.

New universal design permits work on Monojets, Quadrajets, Ford, Chrysler, Holley, Carter and other popular carburetors.

CST 17

3 Piece Wrench Set

The Idle Adjuster Spanner Set is used on 1981 and newer carburetors with idle speed control (ISC) motors. Wrenches are specially designed to be self-centering in both directions, to make it easy finding and maintaining a grip on the two required size screw heads.

The Idle Adjuster Spanner is used on carburetors where the ISC motor is buried and enclosed, making it impossible to use any type of pliers. This tool has an 8" long reach, with self-centering feature and is constructed of long lasting heat treated spring steel.

CARBURETOR SERVICE TOOLS

CST 18

Solenoid/Idle Air Gauge Set for Quadrajets and Dualjets

The **only** accurate way to set mixture control solenoid position and idle bleed on Quadrajets and Dualjet Carburetors 1982 and newer.

Consists of two finely crafted all metal precision gauges — a Mixture Control Solenoid Gauge and an Idle Air Bleed Gauge.

The Idle Air Bleed Gauge features a spring sleeve to ensure snug fit in all carburetors regardless of vent hole size variance. The mixture control solenoid gauge is precision made with knurled base for easy handling.

CST 19

Carburetor Float Level Gauge

"Measure float level without carburetor disassembly and while engine is running".

The CST 19 Float Level is made of gasoline proof, black nylon with easy-to-read calibration. One side has 0 to 28mm, the other side has 0 to 36 in 32nds of an inch. Lobed end makes gauge easy to grip.

Designed for use on Dualjets and Quadrajets as they have openings directly above the float to permit this gauge to rest on the float for accurate readings.

CST 20

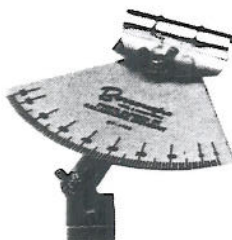

Choke Valve Angle Gauge

This tool is recommended by Rochester Products, GM Service Research and Car Divisions for servicing all Rochester Carburetors 1978 and newer. This unique tool replaces the old drill rod method and gives the accurate results required by the new systems.

This quality tool greatly simplifies setting the Carburetor Choke Valve. Magnetic base holds gauge in place while adjustments are being made, and scale can be read on either side of gauge.

This durable tool is all metal and has adjustable friction at pivot points, with large calibration scales for easy reading.

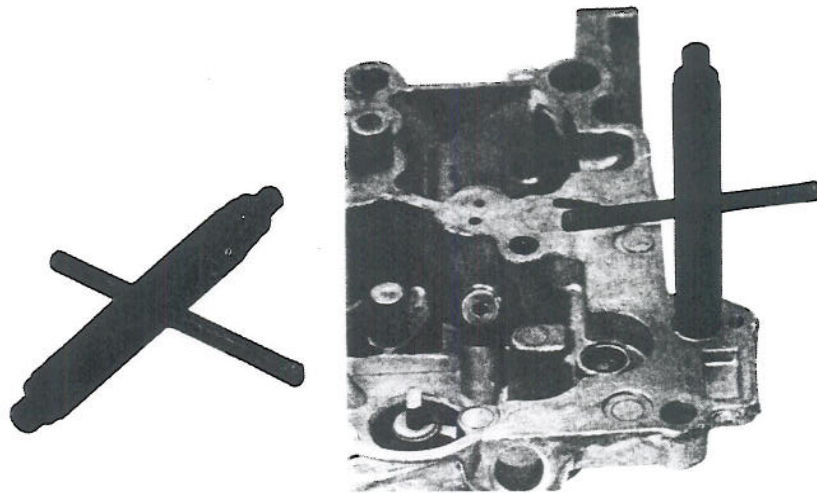

The CST 20 can also be used on diesel throttle linkage using the adaptor included and the complete directions provided.

CARBURETOR SERVICE TOOLS

CST 22 Retainer Boss Reamer

Returns body material (moved during factory staking) to original position on VaraJet accel. and throttle pos. sensor bores, so new retainer falls in easily.

CST 25 Float Positioning Tool Kit

It's no longer necessary to hold float down with fingers. The calibrated 6 ounce weight holds float down and steady while measurements are made — the same for everyone, everytime.

Two interchangeable bases are furnished along with a common weight assembly. The weight assembly features a pin that contacts the float lever cross bar.

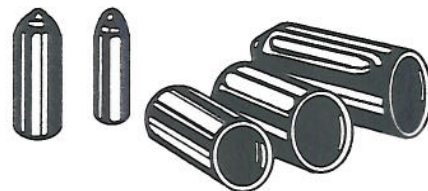

Also included is a spacer to use on VaraJets to insure a firm lock between base and carb. bowl.

Detailed, easy-to-read instructions are included with the CST 25 Kit.

The CST 25 Float Positioning Tool Kit comes packaged in a custom plastic case to keep all items together.

CST 26 Poly Bagged Vacuum Caps

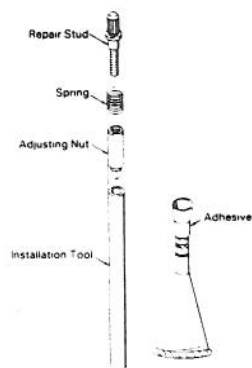

CARBURETOR SERVICE TOOLS

CST 27

Lean Mixture Adjustment Screw

An economical method of salvaging fuel bowl castings with stripped lean mixture solenoid adjusting screw threads!

Instruction Sheet Included

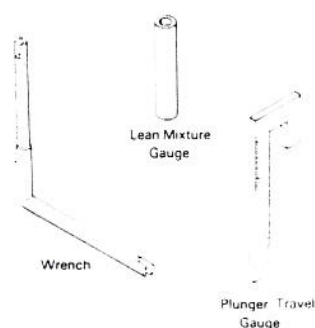

CST 28

Mixture Control Adjustment Kit

Facilitates "On the bench" adjustments of lean mixture screw, rich stop screw, and idle air bleed valve!

Instruction Sheet Included

CSTA 10

C 3 Carburetor Service Tool Assortment

This complete assortment contains all the essential tools to properly service the C 3 system. All tools are professional quality and packed in a sturdy carrying case. Complete directions are enclosed.

Contents:

Choke valve angle gauge

Idle adjustment spanner kit

Noid lite

Float level gauges & bridge

Lean mixture, idle air bleed adjusting tool
